Forcing *Microsoft Disk Protection* to Remember Changes

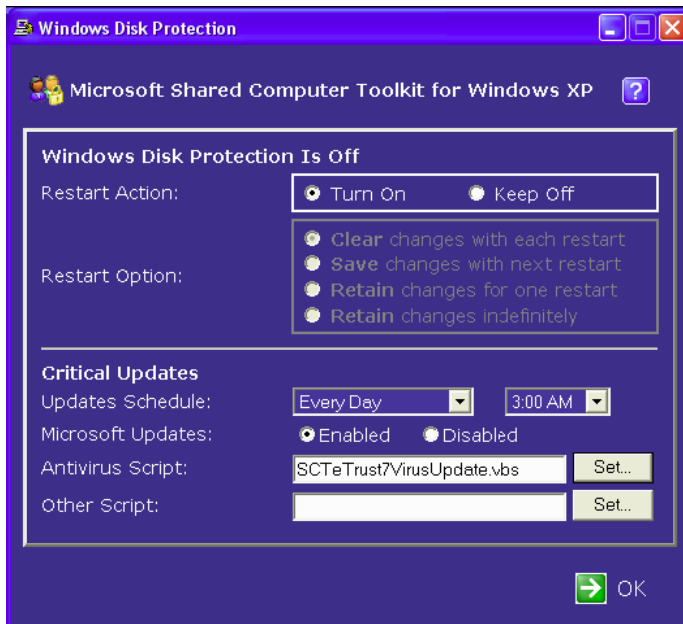

Restart the shared computer to ensure any patron initiated disk changes are cleared.

Log on as the Toolkit administrator

When Windows Disk Protection is on, a popup called **Disk Protection Is On** will appear above the clock when you log on as Exec (Administrator). This popup provides a convenient way to open Windows Disk Protection when you have to save changes

Windows Disk Protection will open

Click **Save changes with next restart**, and then click **OK**. A restart will *not* occur at this time

Make the required changes (such as installing software or changing a user profile) to the shared computer and then restart the computer. When the computer restarts,

Windows saves your changes to the Windows partition and automatically returns to **Clear changes with each restart**
